

Packet8 Virtual Trunking®

Introducing a cost-effective, digital quality dial tone solution for the phone system you already have.

You've already made a big investment in a PBX or key system, so why not maximize what you already have? Packet8 Virtual Trunking enables businesses to be more efficient with their communications budget while extending the longevity of their current phone system. With Packet8 Virtual Trunking, businesses gain the cost savings and flexibility associated with VoIP (Voice over Internet Protocol) without having to purchase a new system.

Delivered over the award winning Packet8 Digital Voice Network, Packet8 Virtual Trunking is a scalable and affordable alternative to traditional dial tone offering local, long distance, toll free and international calling at incredibly low rates.

Packet8 Virtual Trunking can be delivered one line at a time in a pay-as-you-grow model to maximize the communications budget for organizations of any size.

Leverage the investment you've already made:

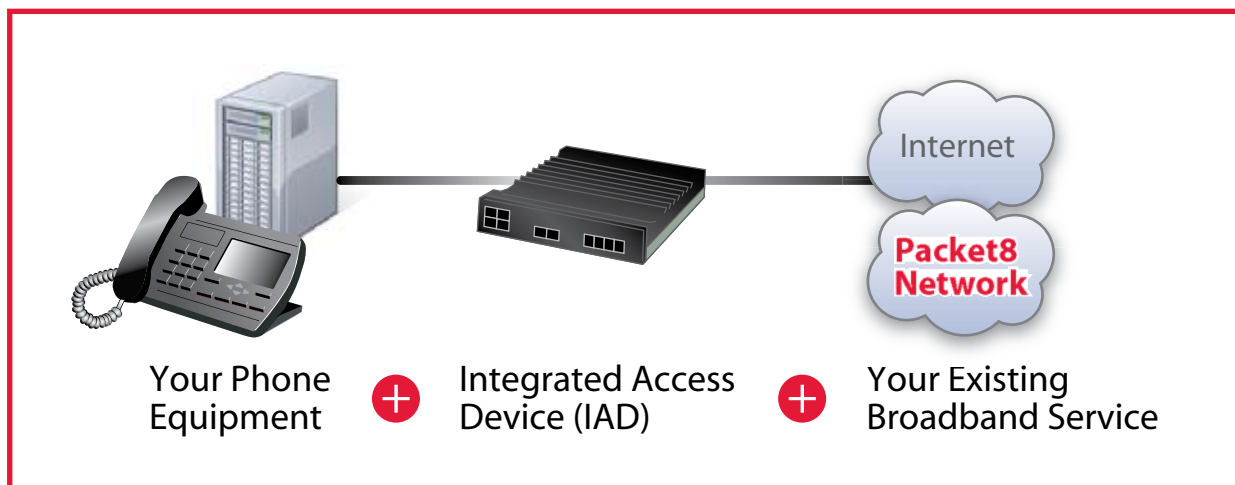

- » Keep your existing equipment
- » Keep your existing phone numbers
- » Utilize existing data connections*
- » Get unlimited free calling between all of your Virtual Trunking sites
- » Take advantage of incredibly low international rates
- » Access multiple services including local, long distance, international and toll-free calling all over a single Virtual Trunk connection
- » Manage accounts online
- » Leverage Packet8's world-class service and support

**Voice requires only 30k per call*

"We highly recommend Packet8 Virtual Trunking to all of our customers!"

"As a leading interconnect, our success is dependant on the quality of services we recommend and deploy. We highly recommend Packet8 Virtual Trunking to all of our customers."

Packet8 Virtual Trunking®

Why pay the monthly recurring charges associated with maintaining two distinct voice and data networks when you can realize significant and immediate savings by running voice as an application on your existing data network? With the Packet8 Virtual Trunking solution, outbound calls are routed over the award-winning Packet8 digital phone network via an IP network, rather than the PSTN (Public Switched Telephone Network), providing both financial and operational efficiencies.

Packet8 Virtual Trunking includes:

- » Inbound/outbound/international calling with one single service
- » Toll-free access
- » Direct Dial Number (DID)
- » Virtual Numbers to provide local phone numbers for your customers
- » Enhanced 911 support
- » Caller ID/CNAM (Calling name delivery)
- » National Directory listing
- » Online billing and account management

World-Class Service

8x8, Inc. (Nasdaq: EGHT), originator of the Packet8 Internet Phone Service, is one of the industry's leading VoIP (Voice over Internet Protocol) communications service providers. Since its establishment in 1987, 8x8 has contributed to the advancement of voice and video communications on both technology and service provision levels. The company has been awarded over 70 United States patents and serves over 11,000 businesses with the Packet8 Virtual Office hosted PBX phone service.

World-Class Support

8x8's 24 x 7 Network Operations Center provides the reliability, security and quality of service expected by the world's most discriminating customers. Our front-line U.S. based customer support personnel are friendly, technically knowledgeable and responsive from the first point of contact on.
